# 1. Product introduction

This data booklet deals with Grundfos CR, CRI and CRN pumps.

CR 5381

**Fig. 1** CR, CRI and CRN pumps

CR, CRI and CRN pumps are vertical multistage, centrifugal pumps. The in-line design of the pumps enables installation in a horizontal one-pipe system where the suction and discharge ports are in the same horizontal level and have the same pipe dimensions. This design provides a more compact pump design and pipework.

CR pumps are available in various sizes and various numbers of stages to deliver the flow and pressure required.

CR pumps are designed for a variety of applications ranging from the pumping of potable water to the pumping of chemicals. The pumps are therefore suitable for a wide diversity of pumping systems where the performance and material of the pump meet specific demands.

A CR pump consists of two main components: the motor and the pump unit.

The motor is a Grundfos motor designed to EN standards.

The pump unit consists of optimised hydraulics, various types of connections, a sleeve, a pump head and various other parts.

CR pumps are available in various material versions according to the pumped liquid.

### Performance range

Fig. 2 Performance range, CR, CRI and CRN

TM02 1192 1013

## EuP ready

The CR, CRI, CRN pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) which has been effective since 1 January 2013. As from this date, all pumps will be classified/graduated in a new energy minimum efficiency index (MEI).

## Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to  $MEI \geq 0.10$  as from 1 January 2013 and  $MEI \geq 0.40$  as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Regulation.

- The benchmark for most efficient water pumps is  $MEI \geq 0.70$ .
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

## Minimum efficiency index (MEI)

Pump type	MEI
CR 1s-3	0.54
CR 1-3	> 0.70
CR 3-3	> 0.70
CR 5-3	0.57
CR 10-3	> 0.70
CR 15-3	> 0.70
CR 20-3	> 0.70
CR 32-3	> 0.70
CR 45-3	> 0.70

<sup>1)</sup> CRN 32 to 150 with HQQE shaft seal: -40 - +120 °C.

<sup>2)</sup> CR, CRN 120 and 150 with 55 or 75 kW motors with HBQE shaft seal: 0-120 °C.

<sup>3)</sup> On request. See the CR "Custom-built pumps" data booklet available on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

## Pump

The CR pumps are non-self-priming, vertical multistage centrifugal pumps.

The pumps are available with a Grundfos standard motor.

The pump consists of a base and a pump head. The chamber stack and the sleeve are secured between the base and the pump head by means of staybolts. The base has suction and discharge ports on the same level (in line). All pumps are fitted with a maintenance-free mechanical shaft seal of the cartridge type.

Fig. 3 CR pump

GR5357 - GR3395

## Motor

### Grundfos MG standard and Siemens motors

CR, CRI and CRN pumps are fitted with a totally enclosed, fan-cooled, 2-pole Grundfos standard motor with principal dimensions to EN standards.

Electrical tolerances according to EN 60034.

CR, CRI, CRN pumps are fitted with three-phase MG motors as standard.

CR, CRI, CRN pumps from 0.37 to 2.2 kW are also available with single-phase motors (1 x 220-230/240 V). See WinCAPS or WebCAPS.

### Grundfos E-motors

We also offer frequency-controlled CRE, CRIE and CRNE pumps which are the ideal choice for a number of applications characterised by a demand for variable flow at constant pressure. These pumps are suited for water supply systems and pressure boosting as well as for industrial applications. Depending on the application, the pumps offer energy savings, increased comfort and improved processing.

See the CRE, CRIE and CRNE data booklet available on [www.Grundfos.com](http://www.Grundfos.com) (WebCAPS).

## Grundfos blueflux®

Grundfos blueflux® technology represents the best from Grundfos within energy-efficient motors and frequency converters. Grundfos blueflux® solutions either meet or exceed legislative requirements, such as the EuP IE3 grade.

Fig. 4 Grundfos blueflux® label

### Electrical data

MG motor CR, CRI, CRN	
Mounting designation	Up to 4 kW: V18 From 5.5 kW: V1
Insulation class	F
Efficiency class	IE3
Enclosure class	IP55 <sup>1)</sup>
Supply voltage	P2: 0.37 - 1.5 kW: 3 x 220-240/380-415 V
Tolerance: - 10/+ 10 %	P2: 2.2 - 5.5 kW: 3 x 380-415 V
	P2: 7.5 - 75 kW: 3 x 380-415/660-690 V
Supply frequency	50 Hz

<sup>1)</sup> IP44, IP54 and IP55 are available on request.

### Optional motors

The Grundfos standard range of motors covers a wide variety of application demands. However, for special applications or operating conditions, custom-built motor solutions can be provided.

For special applications or operating conditions, we offer custom-built motors such as

- ATEX-approved motors
- MG motors with anti-condensation heating unit
- motors with thermal protection.

### Motor protection

#### MG and Siemens motors

Single-phase Grundfos motors have a built-in thermal overload switch (IEC 34-11: TP 211).

Three-phase motors must be connected to a motor-protective circuit breaker according to local regulations.

Three-phase Grundfos motors as from 3 kW have a built-in thermistor (PTC) according to DIN 44082 (IEC 34-11: TP 211).

TM04 9901 0814

## Terminal box positions

As standard, the terminal box is fitted on the suction side of the pump.

Fig. 5 Terminal box positions

## Ambient temperature

Motor power [kW]	Motor make	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 0.55	MG	-	40	1000
0.75 - 22	MG	IE3	60	3500
30 - 75	Siemens	IE3	55	2750

If the ambient temperature exceeds the above maximum temperatures or the pump is installed at an altitude exceeding the above altitude values, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

Fig. 6 Motor output in relation to temperature/altitude

Pos.	Motor power [kW]	Motor make
1	0.37 and 0.55	MG
2	0.75 - 22	MG
3	30-75	Siemens

## Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

In such situations, the pump should be fitted with a larger motor. If in doubt, contact Grundfos.

### Key to codes

Code	Description
<b>Pump version</b>	
A	Basic version
B	Oversize motor
D	Pump with pressure intensifier*
DW	Deep-well pump with ejector*
E	Pump with certificate or ATEX approval
F	Pump for high temperatures (with air-cooled top)
G	Multi-E slave*
H	Horizontal version
HS	High-pressure pump with high-speed MGE motor*
I	Different pressure rating
J	Pump with a different maximum speed
K	Pump with low NPSH
M	Magnetic drive
N	With sensor
P	Undersize motor
R	Horizontal version with bearing bracket
SF	High-pressure pump
V	Multi-E master*
X	Special version
<b>Pipe connection</b>	
A	Oval flange
B	NPT thread
CA	FlexiClamp
CX	Triclamp*
F	DIN flange
G	ANSI flange
J	JIS flange
N	Changed diameter of ports
P	PJE coupling
X	Special version
<b>Materials</b>	
A	Basic version
AD	Carbon-graphite filled PTFE (bearings)
G	Wetted parts EN 1.4401/AISI 316
GI	All parts stainless steel, wetted parts EN 1.4401/AISI 316
I	Wetted parts EN 1.4301/AISI 304
II	All parts stainless steel, wetted parts EN 1.4301/AISI 304
K	Bronze (bearings)
S	SiC bearings + PTFE neck rings
X	Special version
SX	Carbon free

Code	Description
<b>Code for rubber parts in pump</b>	
E	EPDM
F	FXM (Fluoraz <sup>®</sup> )
K	FFKM (Kalrez <sup>®</sup> )
V	FKM (Viton <sup>®</sup> )
<b>Shaft seal type designation</b>	
A	O-ring seal with fixed driver*

### Shaft seal

Example	-H	-Q	-Q	-E
Shaft seal type designation				
Material of rotating seal face				
Material of stationary seal face				
Material of secondary seal (rubber parts)				

## Operating range of the shaft seal

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range shown in fig. 7 applies to clean water and water with anti-freeze liquids. For selection of the right shaft seal, see section 7. *Pumped liquids*, page 75. If the operating range is exceeded, the life of the shaft seal may be reduced.

Fig. 7 Operating range of standard shaft seals

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE	0.37 - 45	O-ring (cartridge) (balanced seal), SiC/SiC, EPDM	-40 - +120
HBQE <sup>1)</sup>	55 - 75	O-ring (cartridge) (balanced seal), carbon/SiC, EPDM	0-120
HQQV	0.37 - 45	O-ring (cartridge) (balanced seal), SiC/SiC, FKM	-20 - +90
HBQV <sup>1)</sup>	55 - 75	O-ring (cartridge) (balanced seal), carbon/SiC, FKM	0-90

<sup>1)</sup> Available as HQQE and HQQV on request.

See section 9. *Variants*, page 87, in case of extreme temperatures:

- low temperatures down to -40 °C
- high temperatures up to +180 °C.

## Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the actual inlet pressure plus the pressure against a closed valve must always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

Pump type	Maximum inlet pressure [bar]
<b>CR, CRI, CRN 1s</b>	
1s-2 → 1s-36	10
<b>CR, CRI, CRN 1</b>	
1-2 → 1-36	10
<b>CR, CRI, CRN 3</b>	
3-2 → 3-29	10
3-31 → 3-36	15
<b>CR, CRI, CRN 5</b>	
5-2 → 5-16	10
5-18 → 5-36	15
<b>CR, CRI, CRN 10</b>	
10-1 → 10-6	8
10-7 → 10-22	10
<b>CR, CRI, CRN 15</b>	
15-1 → 15-3	8
15-4 → 15-17	10
<b>CR, CRI, CRN 20</b>	
20-1 → 20-3	8
20-4 → 20-17	10
<b>CR, CRN 32</b>	
32-1-1 → 32-4	4
32-5-2 → 32-10	10
32-11-2 → 32-14	15
<b>CR, CRN 45</b>	
45-1-1 → 45-2	4
45-3-2 → 45-5	10
45-6-2 → 45-13-2	15
<b>CR, CRN 64</b>	
64-1-1 → 64-2-2	4
64-2-1 → 64-4-2	10
64-4-1 → 64-8-1	15
<b>CR, CRN 90</b>	
90-1-1 → 90-1	4
90-2-2 → 90-3-2	10
90-3 → 90-6	15
<b>CR, CRN 120</b>	
120-1 → 120-2-1	10
120-2 → 120-5-1	15
120-6-1 → 120-7	20
<b>CR, CRN 150</b>	
150-1-1 → 150-1	10
150-2-1 → 150-4-1	15
150-5-2 → 150-6	20

## Examples of operating and inlet pressures

The values for operating and inlet pressures shown in the table should not be considered individually but should always be compared. See the following examples.

### Example 1

The following pump type has been selected:  
CR 5-16 A-A-A.

Maximum operating pressure: 16 bar. Maximum inlet pressure: 10 bar.

Discharge pressure against a closed valve: 10.6 bar.  
See page 35.

This pump is **not** allowed to start at an inlet pressure of 10 bar, but at an inlet pressure of  $16.0 - 10.6 = 5.4$  bar.

### Example 2

The following pump type has been selected:  
CR 10-2 A-A-A.

Maximum operating pressure: 16 bar. Maximum inlet pressure: 8.0 bar.

Discharge pressure against a closed valve: 2 bar.  
See page 39.

This pump **is** allowed to start at an inlet pressure of 8.0 bar, as the discharge pressure against a closed valve is 2.0 bar. This results in an operating pressure of  $8.0 + 2.0 = 10.0$  bar. On the contrary, the maximum operating pressure of this pump is limited to 16.0 bar as a higher operating pressure will require an inlet pressure of more than  $14.0 \text{ bar} > 8.0 \text{ bar}$ .

If the inlet or operating pressure exceeds the pressure permitted, see section 9. *Variants*, page 87.

## 4. Selection and sizing

### Selection of pumps

Selection of pumps should be based on these parameters:

- the duty point of the pump (see below)
- dimensional data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency (see below)
- pump materials (see page 19)
- pump connections (see page 19)
- shaft seal (see page 19).

### Duty point of the pump

From a duty point, it is possible to select a pump on the basis of the curve charts in section 5. *Performance curves and technical data*, page 22.

Fig. 8 Example of a curve chart

### Dimensional data

When sizing a pump, take these parameters into account:

- Required flow and pressure at the draw-off point.
- Pressure loss as a result of height differences ( $H_{geo}$ ).
- Friction loss in the pipework ( $H_f$ ). It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- Best efficiency at the estimated duty point.
- NPSH value. For calculation of the NPSH value, see *Minimum inlet pressure, NPSH*, page 20.

### Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If the pump is expected to operate at the same duty point, select a CR pump which is operating at a duty point corresponding to the best efficiency of the pump.

Fig. 9 Example of a CR pump's duty point

As the pump is sized on the basis of the highest possible flow, it is important always to have the duty point to the right on the efficiency curve (eta) in order to keep the efficiency high when the flow drops.

Fig. 10 Best efficiency

Fig. 11 Dimensional data

### Pump material

Select the material variant on the basis of the liquid to be pumped.

The product range covers the following three basic types.

- CR, CRI  
Use CR, CRI pumps for clean, non-aggressive liquids, such as potable water and oils.
- CRN  
Use CRN pumps for industrial liquids and acids. See [List of pumped liquids](#), page 75, or contact Grundfos.

For saline or chloride-containing liquids such as sea water, CRT pumps of titanium are available.

TM01 2100 1198

Fig. 12 CR pump

### Pump connections

Selection of pump connection depends on the rated pressure and pipework. To meet any requirement, the CR, CRI and CRN pumps offer a wide range of flexible connections, such as

- oval flange (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

TM02 1201 0601

Fig. 13 Pump connections

### Shaft seal

As standard, the CR range is fitted with a Grundfos shaft seal (cartridge type) suitable for the most common applications.

These key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

We offer a wide range of shaft seal variants to meet specific demands. See section 7. [Pumped liquids](#), page 75.

TM02 0538 4800

Fig. 14 Shaft seal (cartridge type)

### Operating pressure and inlet pressure

Do not exceed the limit values for these pressures:

- maximum operating pressure (page 15)
- maximum inlet pressure (page 17).

### Minimum inlet pressure, NPSH

Calculation of the inlet pressure "H" is recommended in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump.

The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v - H_s$$

$p_b$	= Barometric pressure in bar. Barometric pressure can be set to 1 bar. In closed systems, $p_b$ indicates the system pressure in bar.
NPSH	= Net Positive Suction Head in metres head. To be read from the NPSH curve at the highest flow the pump will be delivering.
$H_f$	= Friction loss in suction pipe in metres head. At the highest flow the pump will be delivering.
$H_v$	= Vapour pressure in metres head. To be read from the vapour pressure scale. $H_v$ depends on the liquid temperature $t_m$ .
$H_s$	= Safety margin = minimum 0.5 metres head.

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required.

TM02 7439 3403

Fig. 15 Minimum inlet pressure, NPSH

**Note:** To avoid cavitation, do not select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

## How to read the curve charts

Fig. 16 How to read the curve charts

## Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:1999, Annex A, if indicated.
- The motors used for the measurements are standard Grundfos MG motors.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity:  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt).
- Due to the risk of overheating, the pumps should not be used at a flow below the minimum flow rate.
- The QH curves apply to a rated motor speed of a three-phase mains-operated motor.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

Fig. 17 Minimum flow rate

## 7. Pumped liquids

The pumps are suitable for thin, non-explosive liquids, not containing solid particles or fibres. The liquid must not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than that of water, use oversized motors, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature, content of chemicals and oils.

Please note that aggressive liquids, such as sea water and some acids, may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

### CR and CRI

CR and CRI pumps are suitable for non-corrosive liquids.

Use CR or CRI pumps for liquid transfer, circulation and pressure boosting of cold or hot clean water.

### CRN

CRN pumps are suitable for industrial liquids.

Use CRN pumps in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

### CRT

For saline or chloride-containing liquids such as sea water or for oxidising agents such as hypochlorites, we offer CRT pumps made of titanium.

See the separate data booklet on CRT, CRTE available on [www.Grundfos.com](http://www.Grundfos.com) (WebCAPS).

### List of pumped liquids

A number of typical liquids are listed below.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions. However, use the list with some caution. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

### Notes

<b>D</b>	Often with additives.
<b>E</b>	The density and/or viscosity differ from that/those of water. Take this factor into account when calculating motor output and pump performance.
<b>F</b>	Pump selection depends on many factors. Contact Grundfos.
<b>H</b>	Risk of crystallisation/precipitation in shaft seal.
<b>1</b>	Highly inflammable liquid.
<b>2</b>	Combustible liquid.
<b>3</b>	Insoluble in water.
<b>4</b>	Low self-ignition point.

Pumped liquid	Chemical formula	Note	Liquid concentration, liquid temperature	CR, CRI	CRN
Acetic acid	CH <sub>3</sub> COOH	-	5 %, 20 °C	-	HQQE
Acetone	CH <sub>3</sub> COCH <sub>3</sub>	1, F	100 %, 20 °C	-	HQQE
Alkaline degreasing agent		D, F	-	HQQE	-
Ammonium bicarbonate	NH <sub>4</sub> HCO <sub>3</sub>	E	20 %, 30 °C	-	HQQE
Ammonium hydroxide	NH <sub>4</sub> OH	-	20 %, 40 °C	HQQE	-
Aviation fuel		1, 3, 4, F	100 %, 20 °C	HQB	-

Propylene glycol	CH <sub>3</sub> CH(OH)CH <sub>2</sub> OH	D, E	50 %, 90 °C	HQQE	-
Potassium carbonate	K <sub>2</sub> CO <sub>3</sub>	E	20 %, 50 °C	HQQE	-
Potassium formate (as coolant with inhibitor)	KOOCH	D, E	30 %, 50 °C	HQQE	-
Potassium hydroxide	KOH	E	20 %, 50 °C	-	HQQE
Potassium permanganate	KMnO <sub>4</sub>	-	5 %, 20 °C	-	HQQE
Rape seed oil		D, E, 3	100 %, 80 °C	HQQV	-
Salicylic acid	C <sub>6</sub> H <sub>4</sub> (OH)COOH	H	0.1 %, 20 °C	-	HQQE
Silicone oil		E, 3	100 %	HQQV	-
Sodium bicarbonate	NaHCO <sub>3</sub>	E	10 %, 60 °C	-	HQQE
Sodium chloride (as coolant)	NaCl	D, E	30 %, < 5 °C, pH > 8	HQQE	-
Sodium hydroxide	NaOH	E	20 %, 50 °C	-	HQQE
Sodium hypochlorite	NaOCl	F	0.1 %, 20 °C	-	HQQV
Sodium nitrate	NaNO <sub>3</sub>	E	10 %, 60 °C	-	HQQE
Sodium phosphate	Na <sub>3</sub> PO <sub>4</sub>	E, H	10 %, 60 °C	-	HQQE
Sodium sulphate	Na <sub>2</sub> SO <sub>4</sub>	E, H	10 %, 60 °C	-	HQQE
Softened water		-	< 120 °C	-	HQQE
Soya oil		D, E, 3	100 %, 80 °C	HQQV	-
Sulphuric acid	H <sub>2</sub> SO <sub>4</sub>	F	1 %, 20 °C	-	HQQV
Sulphurous acid	H <sub>2</sub> SO <sub>3</sub>	-	1 %, 20 °C	-	HQQE
Unsalted swimming-pool water		-	Approx. 2 ppm free chlorine (Cl <sub>2</sub> )	HQQE	-

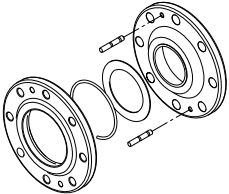

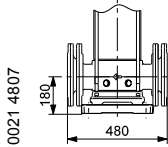

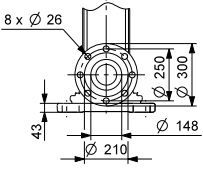

## 8. Accessories

### Pipe connection

Various sets of counter-flanges and couplings are available for pipe connection.

#### Adapter kit

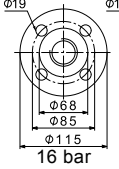

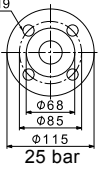

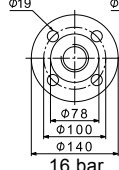

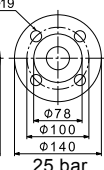

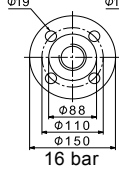

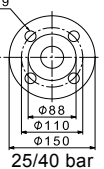

DN 150 flanges are available for CR, CRN 120 and 150 pumps. To use DN 150 flanges, two adapter kits per pump must be ordered.

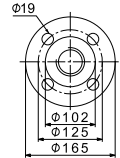

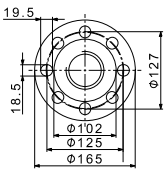

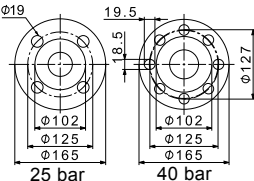

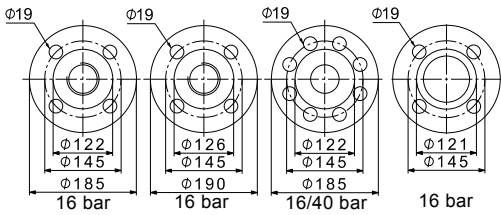

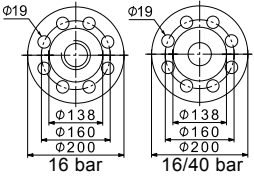

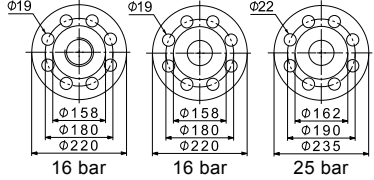

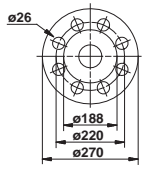

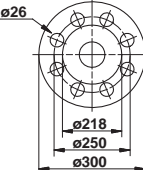

Adapter kit	Pump type	Pipe connection	Number of flange kits required	Product number
  	<b>CR 120</b> <b>CR 150</b>	150 mm, nominal	2	96638169
	<b>CRN 120</b> <b>CRN 150</b>	150 mm, nominal	2	96638180

We offer an optional 6" pump base for the CRN 90, 120 and 150 pump ranges with DN 150 connections according to DIN, ANSI and JIS standards. This base eliminates the need for an adapter kit. For more information, see CR "Custom-built pumps" data booklet on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

#### Counter-flanges for CR

A set consists of one counter-flange, one gasket, bolts and nuts.

Counter-flange	Pump type	Description	Rated pressure	Pipe connection	Product number

\* Flange with 20 mm higher collar. With this collar, the installation dimensions of a CR 20 will be identical to those of a CR 32.  
If a CR 32 is replaced by a CR 20, the base must be raised by 15 mm.

**PJE couplings for CRN**

Materials in contact with the pumped liquid are made of stainless steel EN 1.4401 (AISI 316) and rubber.

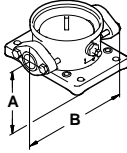

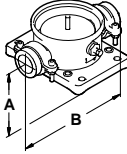

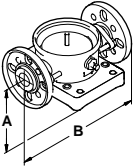

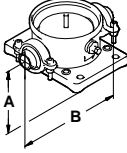

A set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

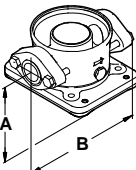

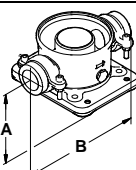

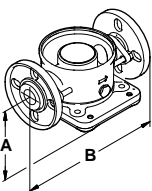

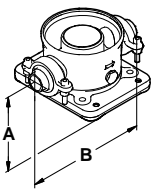

Coupling	Pump type	Pipe stub	Max. pressure [bar]	A	B	Pipe connection	Rubber parts	Number of coupling sets required	Product number

## LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding 130 °C ± 5 °C. Connected to the motor PTC sensor, the LiqTec also monitors the motor temperature.

The LiqTec is prepared for DIN rail mounting in control cabinet.

Enclosure class: IPX0.

LiqTec unit	Pump type	Voltage [V]	LiqTec	Sensor 1/2"	Cable 5 m	Extension cable 15 m	Product number
	CR CRI CRN  TM03 2108 3705	200-240	•	•	•	-	96556429

## 9. Variants

The variants are available on request.

Although the Grundfos CR, CRI, CRN product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos CR "Custom-built pumps" data booklet
- Grundfos "CR, CRN high pressure" data booklet.

Below please find the range of options available for customising the CR pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

### Motors

Variant	Description
<b>ATEX-approved motor</b>	For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required.
<b>Motor with anti-condensation heating unit</b>	For operation in humid environments motors with built-in anti-condensation heating unit may be required.
<b>Motor with thermal protection</b>	We offer motors with built-in bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) incorporated in the motor windings.
<b>Oversize motor</b>	Ambient temperatures above 40 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor (i.e. derating).
<b>4-pole motor</b>	We offer 4-pole standard motors.

### Shaft seals

Variant	Description
<b>Shaft seal with FFKM O-ring</b>	Shaft seals with FFKM or FXM O-ring are recommended for applications where the pumped liquid may damage the standard O-ring material.
<b>Seal with flush, quench seal</b>	Recommended for applications involving crystallising, hardening or sticky liquids.
<b>Air-cooled shaft seal system</b>	Recommended for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time. For such applications, Grundfos' unique air-cooled shaft seal system is recommended. In order to ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required.
<b>Double seal with pressure chamber</b>	Recommended for applications involving poisonous or explosive liquids. Protects the surrounding environment and the people working in the vicinity of the pump. Consists of two seals mounted in a "back-to-back" arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure intensifier generates the seal chamber pressure.
<b>CR MAGdrive</b>	Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmental, dangerous or volatile liquids, e.g. organic compounds, solvents, etc.

### Pumps

Variant	Description
<b>Horizontally mounted pump</b>	For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in the horizontal position. For easy installation the pump is fitted with brackets that support motor and pump.
<b>Low-temperature pump</b>	Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter in order to prevent impeller drag.
<b>High-pressure pump up to 47 bar</b>	For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar.
<b>Low-NPSH pump (improved suction)</b>	Recommended for boiler-feed applications where cavitation may occur due to poor inlet conditions.
<b>Pump with bearing flange</b>	The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. Recommended for standard motors.
<b>Belt-driven pump</b>	Belt-driven pumps designed to operate in places with limited space or where no electrical power is available.
<b>Pump for pharmaceutical and biotechnological applications</b>	CRN pumps designed for applications requiring the sterilisation and CIP capability of pipes, valves and pumps. (CIP = Cleaning-In-Place.)

### Connections and other variants

Variant	Description
<b>Pipe connections</b>	In addition to the wide range of standard flange connections, a 16 bar DIN standard clamping flange is available. Customized flanges are available according to specifications.
<b>TriClamp connection</b>	TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry.
<b>Electropolished pump</b>	To substantially reduce the risk of corrosion of the materials. For use in the pharmaceutical and food industry.

**Sizing**

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation.
- Carry out advanced calculations based on energy, consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool.
- Determine the flow velocity in wastewater applications, etc.

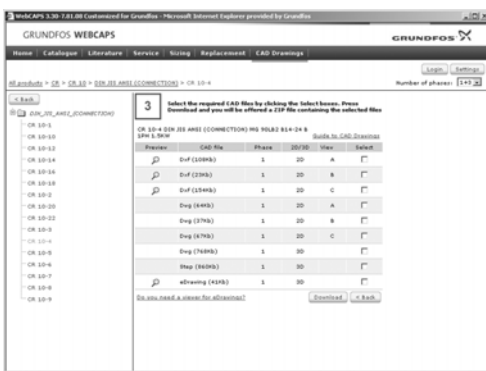

**Replacement**

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

**CAD drawings**

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

- 2-dimensional drawings:**
- .dxf, wireframe drawings
  - .dwg, wireframe drawings.
- 3-dimensional drawings:**
- .dwg, wireframe drawings (without surfaces)
  - .stp, solid drawings (with surfaces)
  - .eprt, E-drawings.

**WinCAPS**

Fig. 18 WinCAPS DVD

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on DVD and updated once a year.
