

Leaks & Mess

Not having the correct seal will result in fast and frequent corrosion due to the sugars produced by the hot wort crystallising on the seal, resulting in messy leaks which are hazardous and take time to clean up.

Damage & Downtime

Leaks caused by having the wrong type of seal can cause damage and downtime, resulting in the costly loss of productivity when your beer production comes to a halt.

Cost of Maintenance, Spare Parts & Repairs

Corroding seals means you'll need to keep replacing them, and this will result in the excessive buying of spare parts. Pump leaks could also cause damage to the motor of the pump and this will require costly repairs and ongoing maintenance.
